BENZ TOOLING

At BENZ Tooling our maxim „Innovation. Precision. Passion.“ is far more than just a marketing formula. Rather, it describes the core goals of our business while also outlining the reasons why we have been able to compete in the market successfully with tool systems for metal machining, woodworking and composite material processing for more than 75 years.

Innovations are important to us. But we also recognize that they can be successful only if they precisely meet the needs of our customers. This is why we have maintained a strict focus on our customers for many years. We ensure that our developments and innovations simplify your production processes and lower your manufacturing costs – and ultimately improve your competitiveness as a result.

INNOVATION. With an eye on what is currently within the bounds of feasibility, we strive to always make use of innovative technologies. And we keep in close contact with our customers to ensure we already know today what our customers will need tomorrow. Technical progress is ingrained into our very identity, which means you can always find smart, detailed solutions in our product range.

PRECISION. We ensure our products have the highest level of precision and reliability. This is vital in our industry. Our customers also rely on absolute precision during production – and need to be able to put all their trust in us. But production is not the only area where we strive for precision. We also seek minimal tolerances and maximum accuracy in other areas as well – from development to sales to delivery.

PASSION. BENZ precision products are composed of a vast array of different individual parts. They are the result of great care that starts in the design phase and even includes the selection of raw materials. Primarily, however, they are the expression of our employee's experience and passion to do good work. We are tool specialists through and through and we are willing to move mountains to reach the perfect solution and to ensure the satisfaction of our customers.

BENZ TOOLING – YOUR PARTNER

COMPLETE MACHINING FOR ALL SECTORS

Angle heads for your application – from standard to custom-made solutions

Do you have an application where an angle head is suitable for machining a workpiece? Then you are right to come to BENZ Tooling. Because our goal is to optimize your production sequence.

As a partner working with CNC machining, we have many years of experience in manufacturing units for machining centers. We know what we are talking about. And we implement what we say.

This is reflected in our products, featuring high performance, machining precision and quality.

BENZ angle heads help you with the economical complete machining of your workpieces by minimizing the number of tool set-ups and the machining time, thus reducing your production costs.

Besides an extensive standard program, we also offer unique, custom-made solutions. In close cooperation with you as a customer we develop the individual answer to your needs. We maintain close contact with machinery manufacturers and therefore have the necessary know-how to develop the exceptional. Challenge us!

BENZ ANGLE HEADS

ADDED VALUE FOR YOUR MACHINE

Angle heads are additional modules that extend the functional scope of your machine tool. They are used in the machining process mainly for cyclical applications.

A machining step is usually followed by a rest period for the unit. The machining of the workpiece is then continued with a newly inserted tool. All BENZ standard units are specially designed for this.

YOUR ADVANTAGES

Reduction of machining time / production costs

BENZ angle heads enable the complete machining of complex workpieces on a machine.

Optimally designed for the machining task

BENZ angle heads are perfectly matched by our specialists to your individual requirements. We have a suitable solution for every challenge!

Machining of hard-to-reach areas

Even locations on workpieces that are difficult to access or were previously inaccessible can be machined with angle heads.

High torque transmission / fewer wear parts

The transmission of high torques and fewer wear parts are realised by using angular gears made up of a crown wheel and spur wheel.

Simplification of the machining procedure

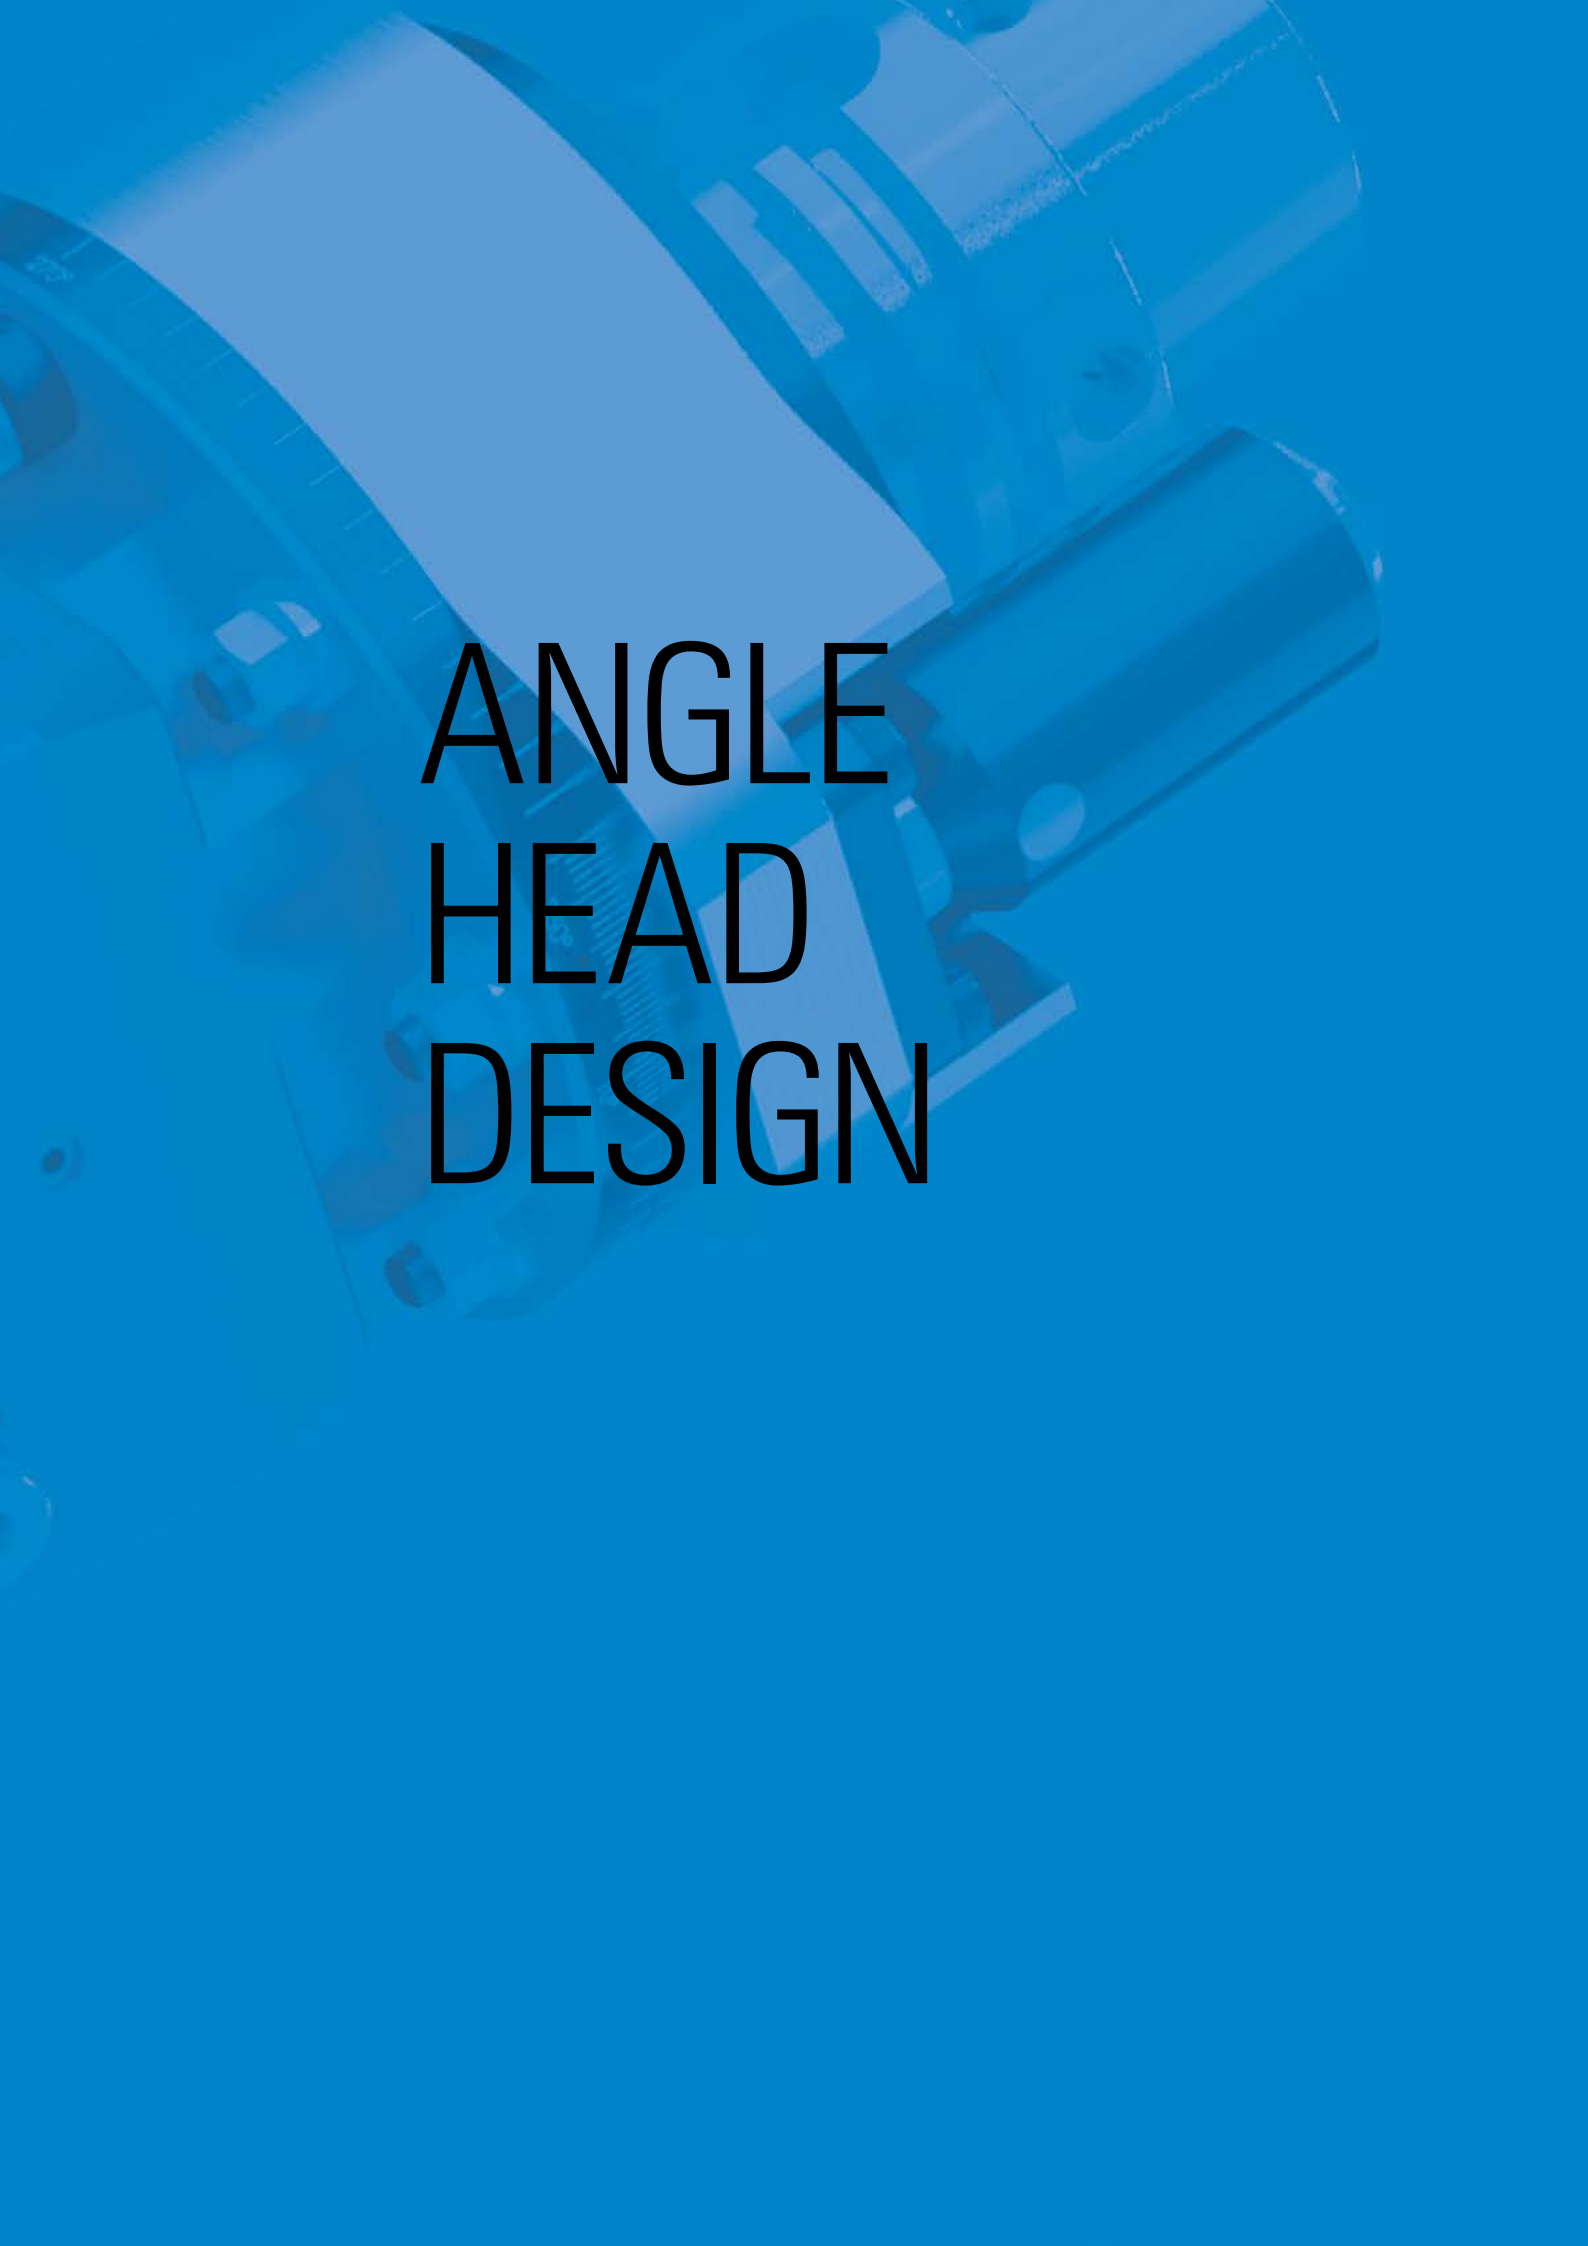

Elaborate and complicated machining procedures can be simplified considerably by using BENZ angle heads.

Compact, modular design

BENZ angle heads have an extremely compact design and consist of components including the output spindle (tool holding/clamping system), angle head, torque arm and taper. Together we prepare the angle head suitable for your work task.

Usable in all common machine concepts

BENZ angle heads are designed for use in all common machining centres with automatic or manual tool change.

BENZ SELECT LINE

PREDFINED ANGLE HEADS

Quick delivery, attractive pricing and BENZ Solidfix®

Our most popular angle heads MONO WSX and FORTE WWX are available in the BENZ Select Line program.

BENZ Select Line products are equipped with our quick-change system BENZ Solidfix®.

Your benefits: even more flexibility and further cost savings – all in the well-known BENZ quality.

BENZ Select Line products are available as BLP version (BENZ locking pin) and TLP version (tapered locking pin).

Including adapter
and stop block

BENZ SELECT LINE ANGLE HEADS

TLP EDITION

CUSTOMIZABLE PRODUCTS

ADAPTABLE ANGLE HEADS

“Plug & Play” with customized standard

Would you like to purchase an angle head and start machining immediately? With the modular component system from BENZ Tooling, this is no longer a challenge.

Using standard components a wide selection of front heads in various sizes and for the most common output spindles allows you to configure the angle head you need for your machining operation.

To ensure that the angle head fits your machine perfectly, we create a customized torque arm – in close cooperation with the machine manufacturer.

Thanks to years of experience and in line with the motto “as much standard as possible, as much customization as needed”, we make sure that you don’t lose time during assembly and can start processing straight away.

DESIGN TYPES

The combination of the machine, the cutting tools used and your workpiece determine which product design is the best for you.

BENZ angle heads are available in various sizes with different parameters. The choice is yours!

See all variations on page 44.

UNIQUE SOLUTIONS

CUSTOM-MADE ANGLE HEADS

We love the challenge and the exceptional

Do you need an angle head that does not match the standard parameters? No problem!

Custom-made products and highly complex new developments are our strength – prompt, affordable and always in the well-known BENZ quality.

Extreme conditions anywhere in the world: our tried and tested components and systems provide you with limitless possibilities.

We develop and produce your angle head made to measure for

- your specific working piece
- your specific machine
- your specific working conditions

See already realized custom-made solutions from page 97.

What can we do for you?

YOUR DIRECT LINE
YOUR CONTACTS WORLDWIDE

1 We define the best possible solution and develop an appropriate concept based on your requirements.

2 Your contact partner starts implementation after coordinating the solution proposal.

3 Your angle head is a high quality piece of work and is produced and assembled at the BENZ factory by experienced employees.

4 Your angle head is subjected to various performance tests before it leaves our factory.

BENZ FEATURES & OPTIONS

ANGLE HEADS SYSTEM DESIGN

GENERAL SYSTEM DESIGN

1 Drive

1a Taper

- holds angle head in machine
- all common tapers available: see p. 21

1b Locking disc

- ensures the exact angle setting of the taper in relation to torque arm, locking sleeve and locking pin

2 Torque arm

2a Locking pin

- lock of taper and locking disc
- prevents turning of drive and enables precise depositing in tool magazine
- the stop block unlocks the angle head

2b Torque arm

- secures angle head against turning during machining by fixing it to the machine spindle
- standard torque arm (e.g. BENZ Select Line p. 34)
- customized torque arm adapted to the machine model of the customer

3 Front head

3a Scale ring (360°)

- manual, stepless turning of angle head at a desired working angle
- fixing using clamping screws

3b Housing

- different types, sizes and designs available for delivery according to application: see p. 44

3c Output spindle

- holds the cutting tool
- all common output spindles possible: see p. 21
- discover the BENZ modular quick-change systems for an optimal solution

BENZ MODULAR QUICK CHANGE SYSTEMS

BENZ SOLIDFIX® | BENZ CAPTO™

An investment worth making

Beside higher rpms and higher accuracy the reduction of set up and machine down times is the main focus in the manufacturing industry. An important success factor is the integration of a modular tool interface.

The basic principle and the biggest advantage of modular tooling systems is that tools can be pre-set, set up and be ready for use on the machine by the operator, all while he is already in the process of machining other parts. The pre-set adapters then can be changed in a flash in the machine.

You as the customer increase the valuable production time of your machine while at the same time saving costs: Due to the modular design only the adapters are being changed – the base tool holder stays in the machine. This reduces the necessity of buying additional tools to a minimum.

With BENZ Solidfix® and BENZ CAPTO™ you have two of the most advanced and sophisticated modular quick change systems available to you.

BENZ SOLIDFIX®

BENZ CAPTO™

PERFORMANCE. PRECISION. HANDLING. SAFETY.

Minimises setup and non-productive time / increases productivity
by changing the preset tool within seconds

Low investment overhead,
because the angle head remains on the machine and only an adapter needs to be changed, fewer angle heads are needed overall

Easy handling
One-hand operation without a special tool

Operating safety
Cannot become detached accidentally

SAVINGS WITH BENZ QUICK CHANGE SYSTEMS

Reduce setup time = Save costs

Long machine standstill times arise for a tool change where the complete unit is taken out of the machine. By changing the cutting tool directly on the unit, setup times can already be reduced by 40%.

The optimum can be achieved with modular quick-change systems. Here the cutting tool is measured outside of the machine in the presetting device. Replacing the adapter therefore only requires a few seconds. You save 90% of your original setup costs! You also reduce your reject rate as the first part is already a good part.

OUTPUT SPINDLES ACCESSORIES

Please see our catalog for detailed information on our modular quick change system as well as all accessories

- adapters BENZ Solidfix®
- adapters BENZ CAPTO™
- accessories for collet chucks
- wrenches
- miscellaneous

PERFECTLY FIT SECURED AND STABLE

BENZ STOP BLOCK

Lock and unlock block

BENZ stop block mounted on the machine spindle secures your unit against rotation during machining, enables fast positioning via the torque arm and guarantees high positioning accuracy during manual or automatic tool change.

The design is standardised according to ISO 9524.

BENZ stop blocks can be adjusted to the machine by the user. In this case, the hole pattern is provided by the user. For this purpose, please observe our latest angle head operating instructions.

We will be happy to help you with the adjustment of the stop block. Please contact us.

1 Spacer block

- regulates the distance between stop block and machine
- matched to the specific machine

2 Stop block

- locks or unlocks the angle head at the machine spindle
- the slot at the stop block holds the locking bolt of the torque arm

3 Torque arm

- increases the rigidity between angle head and machine spindle
- usually adapted to the respective machine
- alternative: BENZ standard torque arm

TLP EDITION

Technical data for BENZ stop block see in section BENZ Select Line from page 36

HOW TO INSTALL

ADDITIONAL SUPPORT

Support for optimal machining results

An additional support increases the stiffness between the machine spindle and the unit. It ensures optimum force transmission from the machine spindle to the tool.

The vibrations that occur during machining are reduced. This leads to better workpiece quality and a longer service life of the aggregate.

Versions

torque arm

torque arm
with 3-point support

torque arm
with 4-point support

mechanical/hydraulic
additional support

The need for an additional support depends on the respective machining case. Please contact us. We will be happy to advise you.

EQUIPMENT VERSIONS

COOLING

Several types and methods of tool cooling

Cooling the cutting edge and the coolant itself have a significant impact on the quality of the workpiece, the life of your cutting tool and therefore on your costs. Depending on the machine load and specifications, we offer following cooling options.

Water coolant: max. 100 bar

MQL: max. 8 bar

WATER COOLING

Coolant supply from the machine

via spindle

via stop block /
torque arm

Coolant supply to the cutting edge

EC

external cooling

IC

internal cooling

EC+IC

external / internal cooling

MQL

internal cooling

MQL – MINIMUM QUANTITY LUBRICATION

Less lubricants – great benefits

Reducing lubricant consumption not only cuts costs, moreover, it protects the environment and improves working conditions.

By reducing residues, MQL also helps to extend the service life of tools and eases cleaning and disposal.

Essentially, minimum quantity lubrication offers an efficient and sustainable lubrication solution.

BENZ angle heads can be equipped with MQL on request.

BENZ MQL technology – optimal MQL flow

BENZ Tooling designed angle heads especially for MQL to always provide the right MQL quantity to the cutting tool.

By using a special, separate curved pipe (without corners and edges) the MQL is directly transported into the cutting tool.

Without baggings and undesired droplet formation this ensures an optimal MQL flow.

Perfect media transfer by customized interfaces

Furthermore we are offering specific adjustment screws for your cutting tool. This secures the perfect interface and transfer of the MQL from the head into the cutting tool.

BENZ MQL angle heads are offered with collets spindle or with the modular quick change system BENZ Solidfix® for even more flexibility.

GEARBOX LIFETIME LUBRICATION

GREASE LUBRICATING

Cyclical machining

All BENZ units are equipped with grease lubrication as a standard feature.

By using grease, long-lasting and durable lubrication is achieved. This type of lubrication permits effective load-carrying capacity, which reduces the wear and friction properties of the gearbox and thus increases the service life of the components.

In addition, the grease provides additional sealing and thus protects against the intrusion of dirt and other impurities into the gearbox.

Due to the permanent grease lubrication, no additional grease needs to be applied during the entire service life.

The installation position of the angle head is not relevant with this type of lubrication.

OIL MIST LUBRICATION – UNIQUE SOLUTIONS

Continuous machining and highest speeds

Oil mist lubrication is a state-of-the-art lubrication technology that produces fine oil droplets in an air stream, ensuring efficient and consistent distribution of the lubricant in the gearbox.

This approach allows the lubrication of hard-to-reach areas that are often neglected by other lubrication methods.

Additionally, the oil mist airflow creates a cooling effect, which contributes to better temperature control of the lubricated parts and also makes it possible to drive at high speeds.

Oil mist lubricated BENZ units can be used in continuous operation – without any breaks – and are suitable for high load volumes.

In case your existing machine cannot provide oil mist, we will be happy to offer you a suitable oil mist unit – please get in touch with us.

The installation position of the angle head is not relevant for this type of lubrication.

This technology is used exclusively in our unique, custom-made solutions.

More benefits

- additional sealing effect due to overpressure in the unit
- permanent renewal of the lubricant
- adjustable lubricant quantity
- significant extension of the service life of the angle head due to good corrosion protection

BENZ i.tag

DIGITAL NAME PLATE

That black dot with NFC logo on your tool catches your eye and you wonder what it is?

You have discovered BENZ i.tag, the Digital Nameplate! Simply scan the dot (tag) with your smartphone and access your product data anytime and anywhere.

BENEFITS

- + time saving: Technical data & documents always at hand and available
- + quick and easy handling via smartphone, no special software required
- + contact the service team directly via online form, direct phone call or e-mail
- + worldwide availability, link can be sent
- + save storage and logistics costs (no more paper documents)
- + you work sustainably and protect the environment by saving paper
- + your tool data is safely managed: BENZ i.tag can be read out, but does not collect or send any data itself

With BENZ i.tag your tool
always carries all important
information with it!

1

Find the NFC tag

UNIQUE SOLUTIONS

ELECTRIC MOBILITY DRIVING THE FUTURE

The industry of the future

Electric mobility is enjoying high growth rates as it combines sustainability aspects with the need for mobility.

In the last decade, the number of electric cars sold worldwide has increased more than tenfold – from 0.8 million units in 2010 to 9.3 million units in 2021.

(Source: Fraunhofer Battery Update 7.12.22)

A continuing trend that, in addition to the e-mobility industry, is also having a significant impact on many suppliers.

In particular, our angle heads with minimum quantity lubrication are frequently used in the field of electromobility. More information about MQL you can find on page 27.

AUTOMOTIVE: TECHNICAL SOLUTIONS AT THE HIGHEST LEVEL

Innovative technologies on the cutting edge of what is possible

For the machining of components in the automotive industry, BENZ Tooling offers technical solutions at the highest level! You benefit from the ambition of our engineering team, because technical innovation is ingrained into our very identity.

BENZ units create an essential competitive edge.

They are not only designed for high quantities in series production, but also shorten the machining cycle for each component.

MORE SPECIAL SOLUTIONS

BRAKE CALIPERS MACHINING IN SMALLEST SPACES

Highest precision in the tightest space...

... is the greatest challenge in the production of brake calipers – both in the area of passenger and commercial vehicles as well as motorcycles.

Especially modern models of high-performance vehicles with electronic brake systems can be very complex to machine.

With BENZ angle heads you are perfectly prepared for these challenges.

We offer the right solution for machining almost all functional surfaces. Additionally, you will not only achieve a clean and precise result, but also an economical one.

BENZ ANGLE HEADS FOR MACHINING IN
THE AEROSPACE INDUSTRY

SOARING FLIGHTS IN AEROSPACE TECHNOLOGY

Precision, reliability, lightweight.

The aerospace industry demands extreme precision and reliability from technology and materials. In aircraft construction and in the production of aerospace components, there is one crucial thing above all: lightness.

For this reason, aluminum and composites are used particularly frequently in this industry. BENZ Tooling offers various solutions for processing highly complex components in the aerospace industry.

PROCESSING OF TURBINE HOUSINGS

UNITS IN APPLICATION

MORE SPECIAL SOLUTIONS

WIND POWER FOR ENVIRONMENTAL CONTRIBUTION

Robust precision for wind turbines

Wind turbines have to meet extraordinary requirements in terms of statics and durability of the individual components.

Despite their robust construction, the manufacturing of wind turbines is real precision work.

Many classic metalworking operations such as milling, drilling and tapping come into play here.

BENZ exchangeable units guarantee high time savings and a low error rate in your individual production processes.

BENZ SERVICES FOR YOUR BENEFIT

Rapid Repair Kits

Promptly solved

- reduce downtime costs due to a machine standstill
- all critical wear and special parts available for a prompt repair
- assembly of your individual Rapid Repair Kit
- offer and order processing
- attractive pricing

Service evaluation and repair

Expertly solved

- quick and professional analysis of damage
- findings and recommended repairs within 5 working days
- you decide based on the recommendation how to proceed
- on request: general overhaul

BENZ TOOLING SERVICE

serviceus@benztooling.com

Service installers come to your site anywhere in the world

Competent service employees answer your questions and help with issues

Preventive maintenance

Precautionary solved

- preventively reduce unplanned downtimes
- increase the unit's lifetime
- maintenance of a perfect product condition
- can be done during a shutdown
- on request: general overhaul

Worldwide on-site service

Globally solved

- professional assembly / product briefing
- troubleshooting
- repair on-site (if possible)
- regular maintenance

Explanation of the weight composition of the angle heads

The weights specified on the product pages always refer to the configuration with an HSK-taper, a standard torque arm and the BENZ Solidfix® output spindle.

The deviations of alternative tool holders and/or alternative machine connections are specified in the tables and have to be added to the original weight.

The weight of a quick-change adapter and that of a tool cutter are not considered.

Usage note – general

The contents of this catalog are not legally binding and are intended solely for informational purposes. Any final agreement will be in the form of a written order confirmation from BENZ GmbH Werkzeugsysteme, which occurs only subject to the respective current General Terms and Conditions of Sale and Delivery of BENZ GmbH Werkzeugsysteme. These can be found online at www.benztooling.com

All of the products listed in this catalog are designed for their intended use, e.g. machines for precision machining. The recognized technical regulations for safety and professional work must be followed for use and installation.

Furthermore, the respective laws, guidelines from TÜV, guidelines from the respective trade association and VDE stipulations shall apply.

The technical data listed in this catalog must be observed by the user. The conditions of use may not fall below or exceed the specified data. If information is missing, it cannot be assumed that there are no upper or lower limits or no limitations for specific use cases. Consultation is required in these cases.

Disposal is not included in the price, which would have to be taken into account accordingly in the event of return to or disposal by BENZ GmbH Werkzeugsysteme.

TECHNICAL DATA AND FIGURES

The technical data and figures have been compiled with great care and to the best of our knowledge. We cannot guarantee that the information is up to date, correct or complete.

The specifications and information – such as figures, drawings, descriptions, dimensions, weights, materials, technical and other performance data and the described products and services – contained in general product descriptions, BENZ GmbH Werkzeugsysteme catalogs, brochures and price lists in any form are subject to change and may be modified or updated at any time without prior notification. They are binding only to the extent expressly specified in a contract or order confirmation. Slight deviations from such descriptive product information shall be considered approved and shall not affect fulfillment of agreements insofar as they are reasonable for the customer.

LIABILITY

Products from BENZ GmbH Werkzeugsysteme are subject to the German Product Liability Act. This catalog does not contain any guarantees, assurances of quality or procurement agreements for the products it depicts, neither expressly nor implied, including for the availability of products. Advertising statements relating to quality features, properties or applications for the products are not legally binding.

To the extent permitted by law, BENZ GmbH Werkzeugsysteme is exempt from any liability for direct or indirect damage, subsequent damage and requests of any kind or on any legal basis resulting from the use of information contained in this catalog.

TRADEMARK, COPYRIGHT AND REPRODUCTION

The depiction of commercial property rights in this catalog – such as brands, logos, registered trademarks or patents – does not include the granting of licenses or use rights. Their use is not permitted without the expressed written agreement of BENZ GmbH Werkzeugsysteme. All contents of this catalog are the intellectual property of BENZ GmbH Werkzeugsysteme. For the purposes of copyright, any unlawful use of intellectual property, including excerpts, is prohibited.
